José Ignacio Leguizamón, Software Developer

Buenos Aires, Argentina, +54 297 506 0758, leguizamonignacio10@gmail.com

Summary

Software developer and IT Management student, focused on creating accessible and efficient digital products. Specialized in transforming business requirements into functional solutions, with a strong interest in backend process optimization and systems architecture. Experienced in complex problem-solving and collaborative work in high-performance environments.

Skills

IT Project Management	Experienced	Agile Methodologies	Experienced
Design Patterns	Experienced	Java and Python Backend Development	Experienced
Software Architecture	Experienced	Systems Analysis and Design	Experienced

Work Experience

2024 - Present Software Developer (Freelance) Argentina

- Development of comprehensive digital solutions and accessible user experiences for various clients, prioritizing backend architecture and system scalability.
- Transformation of technical requirements into functional products, applying principles of user-centered design and digital inclusion.
- Direct management with clients to define project scopes, ensuring the delivery of products that solve specific business needs.

Education

Mar 2023 - Aug 2025 Systems Analyst, UNPA UACO (Incomplete)

- Solid knowledge in algorithm programming and data structures for efficient problem-solving.
- Training in software engineering processes, life cycle models, and development standards.
- Approved technical specialization subjects, providing a solid foundation for the continuation of IT Management studies.

Mar 2026 - Dec 2029 Bachelor’s Degree in IT Management, UADE (Universidad Argentina de la Empresa)

- Comprehensive training in software engineering, technology project management, and systems architectures.
- Focus on the application of technical solutions for the optimization of business processes.
- Training in the systems development life cycle, from requirements analysis to deployment and maintenance.
- Study of agile work methodologies and international standards for the management of technological services.
- Analysis of digital business models and design of technological products centered on scalability and user experience.
